This URL shortener is a fully client-side React app designed for simplicity, speed, and a smooth experience. It uses React functional components with hooks, Material UI for clean, responsive design, and React Router for seamless navigation. All data is stored locally using localStorage, meaning no backend or server is needed. Click tracking and shortcode generation are handled entirely in the browser, with optional geolocation logging. The codebase is modular, separating concerns between UI, logic, and storage for easier maintenance. Validation and error handling are built-in to catch issues early and inform users clearly. Security is considered with input sanitization and HTTPS, though it's limited by the client-only nature. The app is ideal for single-user, demo-scale use but built with future upgrades mind. Long-term plans include backend support, analytics dashboards, user logins, and custom domains.
